*The World's Finest
Horse Fence.*

STEEL BOARD FENCE

The Steel Board Fence system with matching Steel Board Gates is truly in a class by itself. Designed in the traditional "board" style look, the fence components are not made of wood or vinyl, but rather steel - cold-rolled, two-side galvanized steel finished with an architectural grade powder coating.

The Steel Board Gates add the finishing touch and lend to the beautifully straight and continuously flowing fence line.

FEATURES

Beautiful

Elegant ten-foot post centers, perfectly straight rails and posts, rich architectural-grade powder coat, and perfectly matching gates.

Maintenance Free

The powder coat finish is durable, water resistant, impact resistant and UV resistant. No painting required. No warped, broken or sagging rails. No rotting posts.

Strong & Durable

The dimensions and geometry of the steel posts and rails give them considerable strength and flex (or "give") to protect the horse upon impact. Properly treated to resist corrosion, the galvanized powder-coated steel will last twice the life of plastic post-and-rail and 3-times the life of wood.

Thoroughly Engineered & Designed

No nails, screws, or fasteners needed. The rails slide into the posts, and are easily articulated within allowing the fence line to follow the terrain of the land. Installation is simple for the installer or the do-it-yourselfer.

Eco-Friendly

Made primarily of recycled steel and is 100% recyclable. The powder coat finish is non-toxic, free of volatile organic compounds or chemical-based solvents.

Horse Safe

The highly visible posts and rails have smooth, rounded edges and no fasteners or nails. While the steel gives the fence tremendous strength, the long rails and rubber grommets enable the rails to flex and not break. The horse will be cushioned upon impact and not injured.

The Steel Board Fence comes in **3 or 4-rail** configurations and in **gloss-white** or **textured-black**. See the **reverse** side for information on the matching Steel Board **Gate** and **EZ Latch**.
